

## **PRODUCT INFORMATION**

GPC3 **Target** 

DGSX;GTR2-2;MXR7;OCI-5;SDYS;SGB;SGBS;SGBS1 **Synonyms** 

Recombinant Human GPC3 Protein with N-Description

terminal Human Fc tag

In Stock Delivery **Uniprot ID** P51654 **Expression Host HEK293** 

Tag N-Human Fc Tag

Molecular

**Purity** 

hFc(Glu99-Ala330) GPC3(Asp511-Ser560) Characterization

The protein has a predicted molecular mass of **Molecular Weight** 43.3 kDa after removal of the signal peptide.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Formulation &

Reconstitution

Background

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient Storage & Shipping

temperature.

Cell surface heparan sulfate proteoglycans are composed of a membrane-associated protein core substituted with a variable number of heparan sulfate chains. Members of the glypican-related integral membrane proteoglycan family (GRIPS) contain a core protein anchored to the

cytoplasmic membrane via a glycosyl phosphatidylinositol linkage. These proteins may play a role in the control of cell division and growth regulation. The protein encoded by this gene can bind to and inhibit the dipeptidyl peptidase activity of CD26, and it can induce apoptosis in certain cell types. Deletion mutations

in this gene are associated with Simpson-Golabi-Behmel syndrome, also known as Simpson dysmorphia syndrome. Alternative splicing results in multiple transcript variants.
