

## **PRODUCT INFORMATION**

**RAGE Target Synonyms AGER** 

Recombinant human RAGE protein with C-**Description** 

terminal 6×His tag

**Delivery** In Stock **Uniprot ID** Q15109 **Expression Host HEK293** Tag C-6×His Tag

Molecular

Reconstitution

**Background** 

RAGE(Thr27-Thr340) 6×His tag Characterization

The protein has a predicted molecular mass of

34.2 kDa after removal of the signal peptide. The apparent molecular mass of RAGE-His is **Molecular Weight** 

approximately 35-55 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The advanced glycosylation end product (AGE) receptor encoded by this gene is a member of the

immunoglobulin superfamily of cell surface receptors. It is a multiligand receptor, and besides AGE, interacts with other molecules implicated in homeostasis, development, and inflammation, and certain diseases, such as diabetes and Alzheimer's disease. Many

alternatively spliced transcript variants encoding different isoforms, as well as non-protein-coding variants, have been described for this gene (PMID:18089847). [provided by RefSeq, May
