

## **PRODUCT INFORMATION**

SLC4A7 **Target** 

**Synonyms** NBC2;NBC3;NBCN1;SBC2;SLC4A6

Recombinant human SLC4A7 protein with C-**Description** 

terminal 6×His tag

**Delivery** In Stock **Uniprot ID** Q9Y6M7 **HEK293 Expression Host** Tag C-6×His Tag

Molecular Characterization

Storage & Shipping

**Background** 

SLC4A7(Met1-Cys608) 6×His tag

The protein has a predicted molecular mass of **Molecular Weight** 

68.6 kDa after removal of the signal peptide. The apparent molecular mass of SLC4A7-His is

approximately 100-130 kDa due to glycosylation. The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

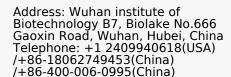

This locus encodes a sodium bicarbonate cotransporter. The encoded transmembrane protein appears to transport sodium and bicarbonate ions in a 1:1 ratio, and is thus considered an electroneutral cotransporter. The encoded protein likely plays a critical role in regulation of intracellular pH involved in visual

and auditory sensory transmission. Alternatively spliced transcript variants encoding distinct isoforms have been described. [provided by
