Molecular

Background

SSTR2(Met1-Asn43) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

30.9 kDa after removal of the signal peptide. The apparent molecular mass of SSTR2-hFc is **Molecular Weight**

approximately 40-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation & Reconstitution

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Somatostatin acts at many sites to inhibit the release of many hormones and other secretory proteins. The biologic effects of somatostatin are probably mediated by a family of G protein-coupled receptors that are expressed in a tissue-

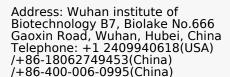

specific manner. SSTR2 is a member of the superfamily of receptors having seven

transmembrane segments and is expressed in highest levels in cerebrum and kidney. [provided
