<b>Sterility</b>	Products are supplied non-sterile. For cell culture applications, dilute in appropriate medium and sterile-filter (0.22 $\mu$ m) prior to use.
<b>Background</b>	This gene encodes a cell surface glycoprotein that represents the founding member of the carcinoembryonic antigen (CEA) family of proteins. The encoded protein is used as a clinical biomarker for gastrointestinal cancers and may promote tumor development through its role as a cell adhesion molecule. Additionally; the encoded protein may regulate differentiation; apoptosis; and cell polarity. This gene is present in a CEA family gene cluster on chromosome 19. Alternative splicing results in multiple transcript variants.
<b>Usage</b>	Research use only
<b>Conjugate</b>	Unconjugated

## CEACAM5

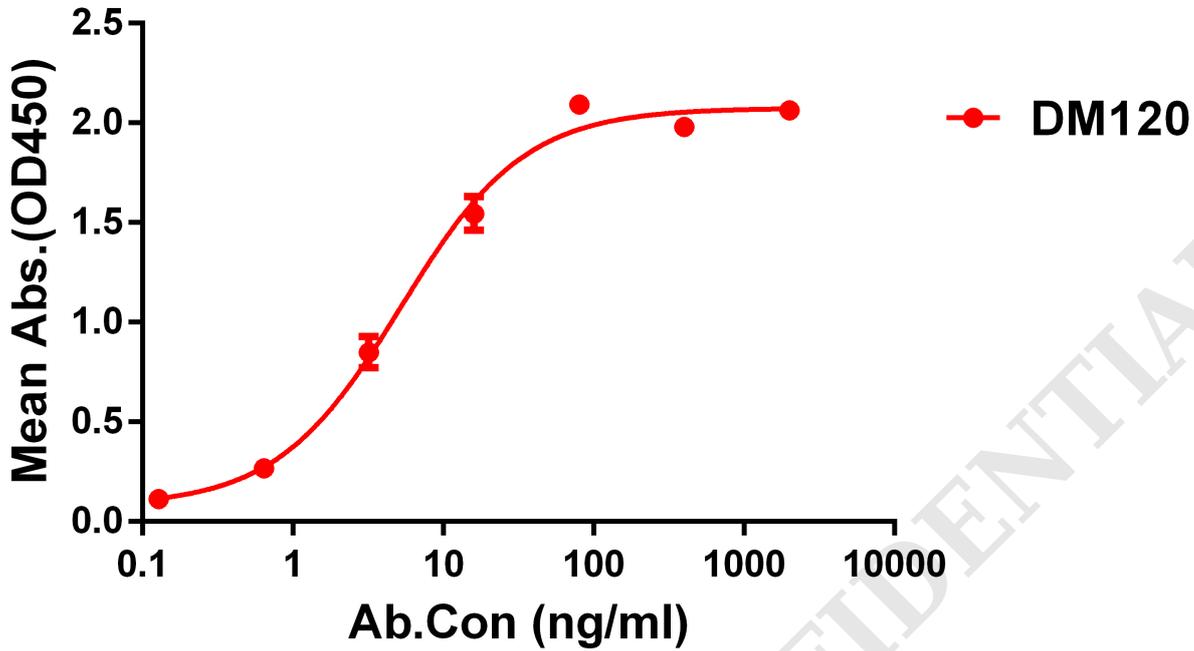

Figure 1. ELISA plate pre-coated by 1  $\mu\text{g/ml}$  (100  $\mu\text{l/well}$ ) Human CEACAM5 protein, His tagged protein PME100071 can bind Rabbit anti-CEACAM5 monoclonal antibody (clone: DM120) in a linear range of 0.1-50 ng/ml.

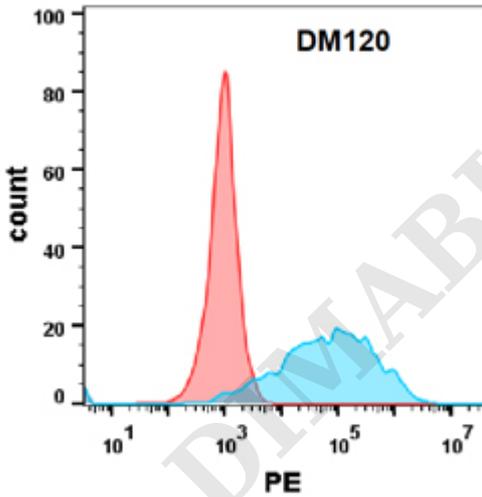

Figure 2. Flow cytometry analysis with Anti-CEACAM5 (DM120) on HEK293 cells transfected with human CEACAM5(Blue histogram) or HEK293 transfected with irrelevant protein (Red histogram).

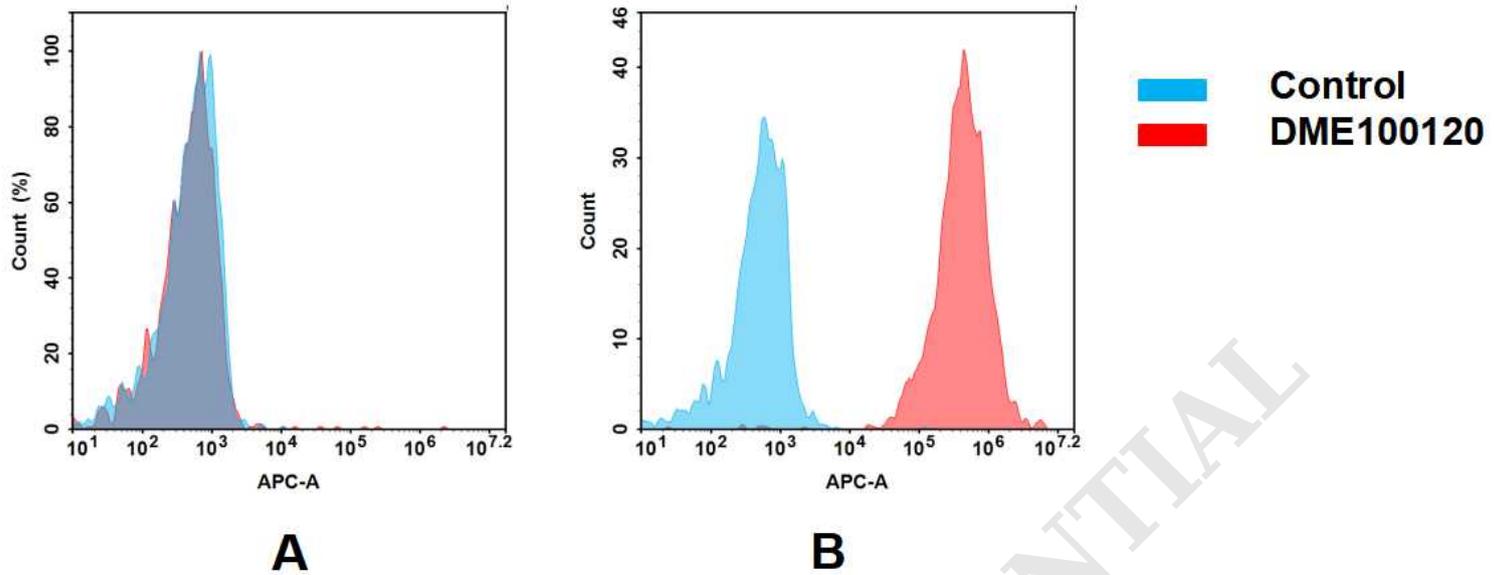

Figure 3. Flow cytometry analysis of antigen binding of rabbit anti-human CEACAM5 mAb(DME100120).

(A) DME100120 does not bind to 293T cells that do not express CEACAM5.

(B) A clear peak shift of DME100120 was seen compared to the control when incubated with CEACAM5-expressing HT55 cells, indicating strong binding of DME100120 to CEACAM5. Antibodies were incubated at 2  $\mu$ g/mL.
