<b>Background</b>	This gene encodes a protein that belongs to the carcinoembryonic antigen (CEA) family whose members are glycosyl phosphatidyl inositol (GPI) anchored cell surface glycoproteins. Members of this family play a role in cell adhesion and are widely used as tumor markers in serum immunoassay determinations of carcinoma. This gene affects the sensitivity of tumor cells to adenovirus infection. The protein encoded by this gene acts as a receptor for adherent-invasive E. coli adhesion to the surface of ileal epithelial cells in patients with Crohn's disease. This gene is clustered with genes and pseudogenes of the cell adhesion molecules subgroup of the CEA family on chromosome 19. [provided by RefSeq; Apr 2014]

Figure 1. Flow cytometry analysis with Anti-CEACAM6(DMC685) on HEK293 cells transfected with human CEACAM6(Blue histogram) or HEK293 transfected with irrelevant protein (Red histogram).

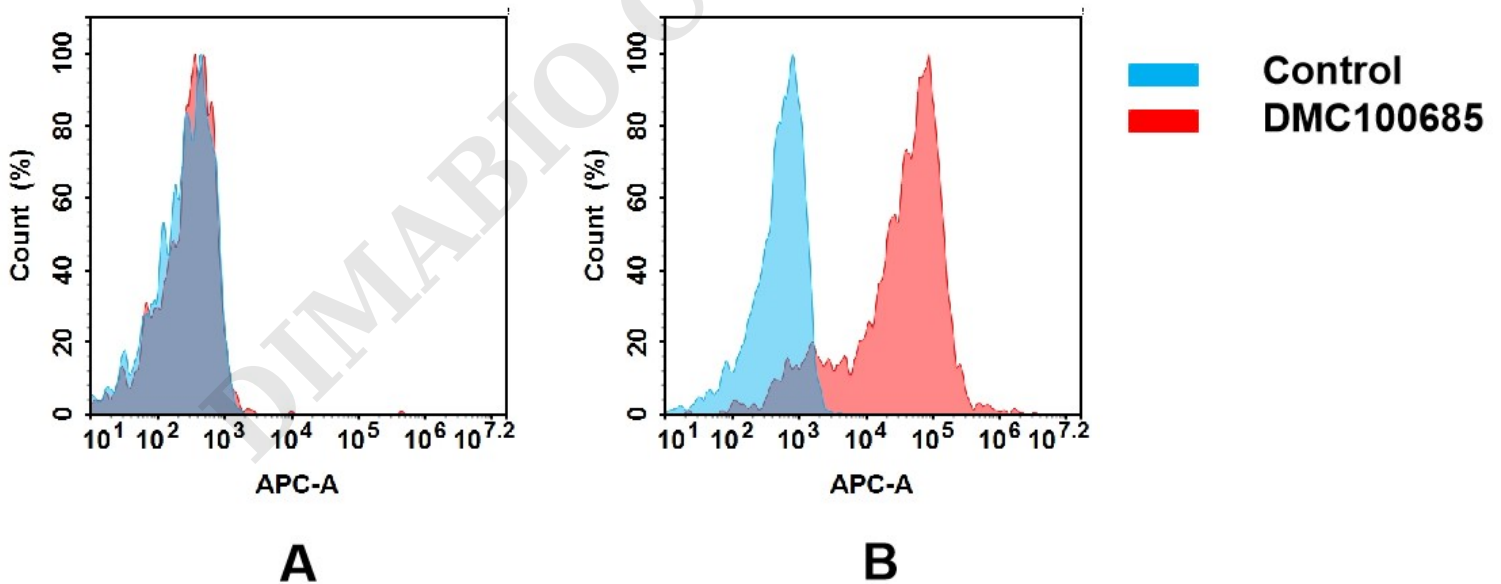

Figure 2. Flow cytometry analysis of antigen binding of anti-human CEACAM6 mAb(DMC100685).

(A) DMC100685 does not bind to jurkat cells that do not express CEACAM6.

(B) A clear peak shift of DMC100685 was seen compared to the control when incubated with CEACAM6-expressing SNU-5 cells, indicating strong binding of DMC100685 to CEACAM6. Antibodies were incubated at 5 µg/ml.
