

PRODUCT INFORMATION

Clone ID	1A5
Target	A29L
Synonyms	A29L
Host Species	Rabbit
Description	Anti-Monkeypox virus A29L antibody(1A5), Rabbit mAb
Delivery	In Stock
Uniprot ID	Q77HM6
IgG type	Rabbit IgG
Clonality	Monoclonal
Reactivity	Monkeypox virus
Applications	ELISA
Recommended Dilutions	ELISA 1/5000-10000
Purification	Purified from cell culture supernatant by affinity chromatography
Endotoxin	Less than 1.0 EU/μg by the LAL method. For <1 EU/mg requirements, please contact us for customization.
Formulation & Reconstitution	Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.
Storage&Shipping	Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
Sterility	Products are supplied non-sterile. For cell culture applications, dilute in appropriate medium and sterile-filter (0.22 μm) prior to use.
Background	Monkeypox is a rare zoonosis caused by monkeypox virus, which has become the most serious orthpoxvirus and consists of complex double stranded DNA. The cases are mostly in central and western Africa. The pathogenesis of monkeypox is that the virus invades the body from respiratory mucosa, multiplies in lymphocytes, and incurs into blood producing transient venereal toxemia. after the virus multiplies in cells, the cells can invade the blood and propagate to the skin of the whole body, causing lesions. A29L binds to cell surface heparin to promote fusion of viral membrane with host plasma membrane.
Usage	Research use only
Conjugate	Unconjugated

Figure 1. ELISA plate pre-coated by 1 μ g/ml (100 μ l/well) Human A29L Protein can bind Rabbit anti-A29L monoclonal antibody(clone: 1A5) in a linear range of 1-10 ng/ml.
