<b>Background</b>	This gene encodes a receptor tyrosine kinase-like orphan receptor that modulates neurite growth in the central nervous system. The encoded protein is a glycosylated type I membrane protein that belongs to the ROR subfamily of cell surface receptors. It is a pseudokinase that lacks catalytic activity and may interact with the non-canonical Wnt signalling pathway. This gene is highly expressed during early embryonic development but expressed at very low levels in adult tissues. Increased expression of this gene is associated with B-cell chronic lymphocytic leukaemia. Alternative splicing results in multiple transcript variants encoding different isoforms. Figure 1. Anti-ROR1 antibody (SKU# DMC100228) at 1/1000 dilution

Lane : 293T-ROR1, whole cell lysate

Secondary : Goat Anti-Rabbit IgG H&L (HRP) at 1/5000 dilution

Predicted band size: 104 kDa  
Observed band size: 110 kDa

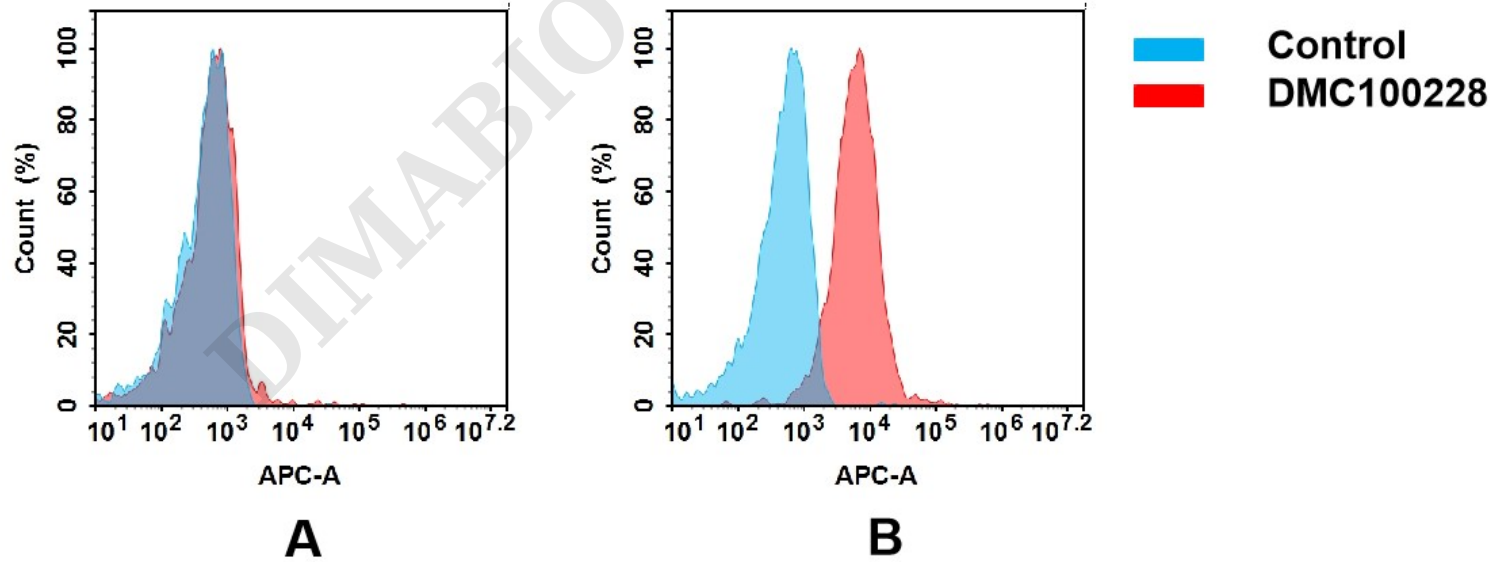

Figure 2. Flow cytometry analysis of antigen binding of anti-human ROR1 mAb (DMC100228).  
(A) DMC100228 does not bind to CHO-S cells that do not express ROR1.  
(B) A clear peak shift of DMC100228 was seen compared to the control when incubated with ROR1-expressing AGS cells, indicating strong binding of DMC100228 to ROR1. Antibodies were incubated at 5 µg/mL.
