

PRODUCT INFORMATION

Target FOLR1

Synonyms FBP; FOLR; NCFTD; FRalpha

Recombinant Cynomolgus FOLR1 protein with C-**Description**

terminal 10×His tag

Delivery In Stock

Expression Host

Purity

Uniprot ID A0A2K5U044

Tag C-10×His tag

Molecular FOLR1(Arg25-Met233) 10×His tag Characterization

HEK293

The protein has a predicted molecular mass of **Molecular Weight** 25.9 kDa after removal of the signal peptide.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before Formulation &

lyophilization. Please see Certificate of Analysis Reconstitution for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is a member of the folate receptor family. Members of this gene family bind folic acid and its reduced derivatives, and transport 5-methyltetrahydrofolate into cells. This gene product is a secreted protein that either

anchors to membranes via a glycosyl-

phosphatidylinositol linkage or exists in a soluble **Background**

form. Mutations in this gene have been associated with neurodegeneration due to cerebral folate transport deficiency. Due to the presence of two promoters, multiple transcription start sites, and alternative splicing, multiple transcript variants encoding the same protein have been found for this gene. [provided by

RefSeq, Oct 2009]

Usage Research use only

Conjugate Unconjugated
