

PRODUCT INFORMATION

|                              |   |
|------------------------------|---|
| Target                       | MICB  |
| Synonyms                     | MIC-B, PERB11.2   |
| Description                  | Recombinant Cynomolgus MICB protein with C-terminal 10×His tag  |
| Delivery                     | In Stock  |
| Uniprot ID                   | A0A7N9DG75  |
| Expression Host              | HEK293  |
| Tag                          | C-10×His tag  |
| Molecular Characterization   | MICB(Ala23-Arg304) 10×His tag   |
| Molecular Weight             | The protein has a predicted molecular mass of 33.4 kDa after removal of the signal peptide. The apparent molecular mass of cMICB-His is approximately 35-55 kDa due to glycosylation.   |
| Purity                       | The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue staining.  |
| Formulation & Reconstitution | Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.  |
| Storage & Shipping           | Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.   |
| Background                   | This gene encodes a heavily glycosylated protein which is a ligand for the NKG2D type II receptor. Binding of the ligand activates the cytolytic response of natural killer (NK) cells, CD8 alphabeta T cells, and gammadelta T cells which express the receptor. This protein is stress-induced and is similar to MHC class I molecules; however, it does not associate with beta-2-microglobulin or bind peptides. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jan 2014] |
| Usage                        | Research use only   |
| Conjugate                    | Unconjugated  |
