

PRODUCT INFORMATION

ROR2 **Target**

Synonyms BDB; BDB1; NTRKR2

Recombinant Cynomolgus ROR2 protein with N-**Description**

terminal 10×His tag

Delivery In Stock

Uniprot ID XP_005582291.2

Expression Host HEK293

Tag N-10×His tag

Molecular

Storage & Shipping

Background

Purity

10×His tag ROR2(Glu34-Met402) Characterization

The protein has a predicted molecular mass of 42.6 kDa after removal of the signal peptide. The **Molecular Weight**

apparent molecular mass of His-cROR2 is

approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation & Reconstitution

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is a receptor protein tyrosine kinase and type I transmembrane protein that belongs to the ROR subfamily of cell surface receptors. The protein may be involved in the early formation of the chondrocytes and may be required for cartilage and growth plate development. Mutations in this gene can cause

brachydactyly type B, a skeletal disorder characterized by hypoplasia/aplasia of distal phalanges and nails. In addition, mutations in this gene can cause the autosomal recessive form of Robinow syndrome, which is characterized by skeletal dysplasia with generalized limb bone
