

PRODUCT INFORMATION

Target	CA12
Synonyms	CAXII; CA-XII; T18816; HsT18816
Description	Recombinant human CA12 Protein with C-terminal 10×His tag
Delivery	In Stock
Uniprot ID	O43570
Expression Host	HEK293
Tag	C-10×His tag
Molecular Characterization	CA12(Ala25-Ser301) 10×His tag
Molecular Weight	The protein has a predicted molecular mass of 32.5 kDa after removal of the signal peptide. The apparent molecular mass of CA12-His is approximately 25-55 kDa due to glycosylation.
Purity	The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue staining.
Formulation & Reconstitution	Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.
Storage & Shipping	Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
Background	Carbonic anhydrases (CAs) are a large family of zinc metalloenzymes that catalyze the reversible hydration of carbon dioxide. They participate in a variety of biological processes, including respiration, calcification, acid-base balance, bone resorption, and the formation of aqueous humor, cerebrospinal fluid, saliva, and gastric acid. This gene product is a type I membrane protein that is highly expressed in normal tissues, such as kidney, colon and pancreas, and has been found to be overexpressed in 10% of clear cell renal carcinomas. Three transcript variants encoding different isoforms have been identified for this gene. [provided by RefSeq, Jun 2014]
Usage	Research use only
Conjugate	Unconjugated
