

## **PRODUCT INFORMATION**

C-Flag Tag Tag

CAC1 **Target** 

**Synonyms** Cav3.3, ca(v)3.3

Human CAC1 full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q9P0X4 **Expression Host HEK293** 

**Protein Families** Ion Channels: Calcium

**Protein Pathways** N/A

Storage & Shipping

**Background** 

The human full length CAC1 protein has a MW of **Molecular Weight** 

245.1kDa

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

Lyophilized from nanodisc solubilization buffer (20

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

This gene encodes the pore-forming alpha subunit of a voltage gated calcium channel. The encoded protein is a member of a subfamily of calcium channels referred to as is a low voltageactivated, T-type, calcium channel. The channel encoded by this protein is characterized by a slower activation and inactivation compared to

other T-type calcium channels. This protein may be involved in calcium signaling in neurons. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Oct 2011]

Usage Research use only Conjugate Unconjugated
