

## **PRODUCT INFORMATION**

CCL11 **Target Synonyms** SCYA11

Recombinant Human CCL11 Protein with C-Description

terminal human Fc tag

**Delivery** In Stock **Uniprot ID** P51671 **Expression Host HEK293** 

Tag C-Human Fc Tag

Molecular

Purity

**Background** 

CCL11(Thr30-Pro97) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of 34.0 kDa after removal of the signal peptide. The **Molecular Weight** 

apparent molecular mass of CCL11-hFc is approximately 35-55 kDa due to glycosylation.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This antimicrobial gene is one of several chemokine genes clustered on the q-arm of chromosome 17. Chemokines form a superfamily

of secreted proteins involved in

immunoregulatory and inflammatory processes. The superfamily is divided into four subfamilies based on the arrangement of the N-terminal cysteine residues of the mature peptide. This chemokine, a member of the CC subfamily, displays chemotactic activity for eosinophils, but not monopulate cells or neutrophils. This

not mononuclear cells or neutrophils. This eosinophil-specific chemokine is thought to be involved in eosinophilic inflammatory diseases such as atopic dermatitis, allergic rhinitis, asthma and parasitic infections. [provided by RefSeq, Sep
