

PRODUCT INFORMATION

Target CCL22

MDC; ABCD-1; SCYA22; STCP-1; DC/B-CK; A-152E5.1 **Synonyms**

Recombinant human CCL22 Protein with C-**Description**

terminal human Fc tag

Delivery In Stock 000626 **Uniprot ID Expression Host HFK293**

C-Human Fc tag Tag

Molecular

Background

CCL22(Gly25-Gln93) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

34.2 kDa after removal of the signal peptide. The **Molecular Weight** apparent molecular mass of CCL22-hFc is

approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before Formulation & lyophilization. Please see Certificate of Analysis Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

This antimicrobial gene is one of several Cys-Cys (CC) cytokine genes clustered on the q arm of chromosome 16. Cytokines are a family of secreted proteins involved in immunoregulatory and inflammatory processes. The CC cytokines are proteins characterized by two adjacent cysteines. The cytokine encoded by this gene displays chemotactic activity for monocytes, dendritic cells, natural killer cells and for

chronically activated T lymphocytes. It also displays a mild activity for primary activated T lymphocytes and has no chemoattractant activity

for neutrophils, eosinophils and resting T lymphocytes. The product of this gene binds to chemokine receptor CCR4. This chemokine may play a role in the traffic of activated T lymphocytes to inflammatory sites and other
