

PRODUCT INFORMATION

CCL7 **Target**

FIC; MARC; MCP3; NC28; MCP-3; SCYA6; SCYA7 **Synonyms**

Recombinant human CCL7 Protein with C-terminal **Description**

human Fc tag

Delivery In Stock **Uniprot ID** P80098 **Expression Host HEK293**

Tag C-Human Fc tag

Molecular

Storage & Shipping

Background

CCL7(Gln24-Leu99) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

35.1 kDa after removal of the signal peptide. The **Molecular Weight** apparent molecular mass of CCL7-hFc is

approximately 35-55 kDa due to glycosylation.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes monocyte chemotactic protein

3, a secreted chemokine which attracts

macrophages during inflammation and metastasis. It is a member of the C-C subfamily of

chemokines which are characterized by having two adjacent cysteine residues. The protein is an in vivo substrate of matrix metalloproteinase 2, an enzyme which degrades components of the extracellular matrix. This gene is part of a cluster

of C-C chemokine family members on

chromosome 17q. [provided by RefSeq, Jul 2008]
