Human CCR6 Protein, mFc Tag Cat. No. PME101105

PRODUCT INFORMATION

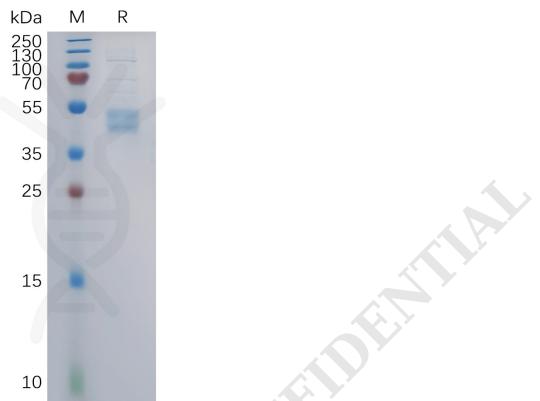

SynonymsCC-CKR-6;CKR-L3;DRY6;GPRCY4;CD196DescriptionRecombinant human CCR6 protein with C- terminal mouse Fc tagDeliveryIn StockUniprot IDP51684Expression HostHEK293TagC-Mouse Fc TagMolecular CharacterizationCCR6(Met1-Leu47) mFc(Pro99-Lys330)The protein has a predicted molecular mass of 31.7 KDa after removal of the signal peptide. The apparent molecular mass of CCR6-mFc is apparent molecular mass of CCR6-mFc is apport molecular mass of CCR6-mFc is apport molecular mass of CCR6-mFc is or poptilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilized form sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilized form sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilized form sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilized form sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilized form sterile reconstitution. If not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized form after reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature. This gene encodes a member of the beta chemokine receptor family, which is predicted to be a seven transmembrane protein similar to G protein-coupled receptors. The gene is preferentially expressed by immature dendritic cells The lignad of this receptor is macrophage inflammatory and immunological responses. Alternatively spliced transcrip variants that encode the same protein	Target	CCR6
Descriptionterminal mouse Fc tagDeliveryIn StockUniprot IDP51684Expression HostHEK293TagC-Mouse Fc TagMolecular CharacterizationCCR6(Met1-Leu47) mFc(Pro99-Lys330)Molecular CharacterizationThe protein has a predicted molecular mass of 31.7 KD after removal of the signal peptide. The apparent molecular mass of CCR6-mFc is approximately 35-5 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie Blue staining.PurityLyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trealabse is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution, if not intended for use within a month, aliquot and store at -80° C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.Storage & ShippingThis gene encodes a member of the beta chemokine receptor family, which is predicted to be a seven transmembrane protein smalter to G protein-coupled receptors. The gene is preferentially expressed by immature dendritic cells and memory T cells. The ligand of this receptor is macrophage inflammatory protein 3 alpha (MIP-3 alpha). This receptor has been and antigen-driven B-cell differentiation, and it may require the migration and recruitment of dentritic and T cells during inflammatory and immunological responses. Alternatively spliced transcript variants that encode the same protein have been described for this gene. [provided by ReSeq. Jul 2008]	Synonyms	CC-CKR-6;CKR-L3;DRY6;GPRCY4;CD196
Uniprot IDP51684Expression HostHEK293TagC-Mouse Fc TagMolecular CharacterizationCCR6(Met1-Leu47) mFc(Pro99-Lys330)Molecular WeightThe protein has a predicted molecular mass of 31.7 kDa after removal of the signal peptide. The apparent molecular mass of CCR6-mFc is approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilized form After reconstitution. Storage & ShippingStorage & ShippingThis gene encodes a member of the beta chemokine receptor family. which is predicted to be a seven transmembrane protein similar to G protein-coupled receptors. The gene is preferentially expressed by immature dendritic cells and memory T cells. The lingand of this receptor is macrophage inflammatory protein 3 alpha (MIP-3 alpha). This receptor has been shown to be important for B-lineage maturation and antigen-driven B-cell differentiation, and it may regulate the megoration and recruitment of deminitic and T cells during inflammatory protein 3 alpha (MIP-3 alpha). This receptor has been shown to be important for B-lineage maturation and antigen-driven B-cell differentiation, and it may regulate the megoration and recruitment of deminitic and T cells during inflammatory and immunological responses. Alternatively spliced transcript variants that encode the same protein have been described for this gene. Iprovided by ReFSeq, jul 2008]	Description	
Expression HostHEK293TagC-Mouse Fc TagMolecular CharacterizationCCR6(Met1-Leu47) mFc(Pro99-Lys330)Molecular WeightThe protein has a predicted molecular mass of 31.7 KDa after removal of the signal peptide. The apparent molecular mass of CCR6-mFc is approximately 35-5 KDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trealases is added as protectants before lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trealases is added as protectants before lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.BackgroundBackground and memory r cells. The ligand of this receptor is macrophage inflammatory protein 3 alpha (MIP-3 alpha). This receptor has bee net responses. Alternatively spliced transcript variants that encode the same protein and antigen-driven B-cell differentiation, and it may regulate the migration and recruitment of dentrific and T cells during inflammatory and immunological responses. Alternatively spliced transcript variants that encode the same protein have been described for this gene. [provided by RefSeq, Jul 2008]	Delivery	In Stock
TagC-Mouse Fc TagMolecular CharacterizationCCR6(Met1-Leu47) mFc(Pro99-Lys330)Molecular WeightThe protein has a predicted molecular mass of 31.7 Kba after removal of the signal peptide. The apparent molecular mass of CCR6-mFc is approximately 35-55 Kba due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.PurityCommulation & - 8% threhalose is added as protectants before lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% threhalose is added as protectants before lyophilized form sterile PBS, pH 7.4. Normally 5 % - 8% threhalose is added as protectants before lyophilized form. After reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized protects are shipped at ambient temperature.BackgroundBackgroundAlpha (MIP-3 alpha). This receptor has been eceptor is macrophage inflammatory protein 3 alpha (MIP-3 alpha). This receptor has been shown to be important for B-lineage maturation and antigen-driven B-cell differentiation, and it may regulate the migration and recruitment of dentritic and T cells during inflammatory and immuological responses. Alternatively spliced transcript variants that encode the same protein have been described for this gene. [provided by RefSeq, Jul 2008]WageResearch use only	Uniprot ID	P51684
Molecular CharacterizationCCR6(Met1-Leu47) mFc(Pro99-Lys330)Molecular WeightThe protein has a predicted molecular mass of apparent molecular mass of CCR6-mFc is approximately 35-55 KDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. Storage & ShippingStorage & Shippinga. 20°C to -80°C for 12 months in lyophilized proteins are shipped at ambient temperature. This gene encodes a member of the beta chemokine receptor family, which is predicted to be a seven transmembrane protein similar to G protein-coupled receptors. The gene is preferentially expressed by immature dendritic cells and memory T cells. The ligand of this receptor is macrophage inflammatory protein 3 alpha. (MIP-3 alpha). This receptor has been shown to be important for B-lineage maturation and antigen-driven B-cell differentiation, and it may regulate the migration and recruitment of dentritic and T cells during inflammatory and immunological responses. Alternatively spliced transcript variants that encode the same protein have been described for this gene. [provided by RefSeq, Jul 2008]UsageResearch use only	Expression Host	HEK293
CharacterizationCCR6(Met1-LeU47) mrc(Pr099-Lys330)Molecular WeightThe protein has a predicted molecular mass of 31.7 kDa after removal of the signal peptide. The apparent molecular mass of CCR6-mFc is approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. Lyophilization Please see Certificate of Analysis for specific instructions of reconstitution. Storage & ShippingStorage & ShippingStorage & ShippingBackgroundBackgroundBackgroundResearch and specific and the protein similar to G protein-coupled receptors. The gene is preferentially expressed by immature dendritic cells and memory T cells. The ligand of this receptor is macrophage inflammatory protein 3 alpha. (MIP-3 alpha). This receptor has been shown to be important for B-lineage maturation and time and tiger approximately appliced transcript variants that encode the same protein and timenological responses. Alternatively spliced transcript variants that encode the same protein have been described for this gene. [provided by RefSeq, Jul 2008]WageResearch use only	Tag	C-Mouse Fc Tag
Molecular Weight31.7 kDa after removal of the signal peptide. The apparent molecular mass of CCR6-mFc is approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. Lyophilized from sterile PBS, pH 7.4. Normally 5 % - % trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. Storage & ShippingStorage & ShippingStore at -20°C to -80°C for 12 months in lyophilized form. After reconstitution. Is an addition of the beta chemokine receptor family. which is predicted to be a seven transmembrane protein similar to G protein-coupled receptors. The gene is preferentially expressed by immature dendritic cells and memory T cells. The ligand of this receptor is macrophage inflammatory protein 3 alpha (MIP-3 alpha). This receptor has been shown to be important for B-lineage maturation and antigen-driven B-cell differentiation, and it may regulate the migration and recruitment of dentritic and T cells during inflammatory and immunological responses. Alternatively spliced transcript variants that encode the same protein have been described for this gene. [provided by RefSeq, Jul 2008]UsageResearch use only		CCR6(Met1-Leu47) mFc(Pro99-Lys330)
Puritydetermined by SDS-PAGE and Coomassie blue staining.Formulation & ReconstitutionLyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilizetion. Please see Certificate of Analysis for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.BackgroundBackgroundBackgroundalignal, MIP-3 alpha). This receptor family, which is predicted to be a seven transmembrane protein similar to G protein-coupled receptors. The gene is preferentially expressed by immature dendritic cells and memory T cells. The ligand of this receptor is macrophage inflammatory protein 3 alpha (MIP-3 alpha). This receptor has been shown to be important for B-lineage maturation and antigen-driven B-cell differentiation, and it may regulate the migration and recruitment of dentritic and T cells during inflammatory and immunological responses. Alternatively spliced transcript variants that encode the same protein have been described for this gene. [provided by RefSeq, Jul 2008]UsageResearch use only	Molecular Weight	31.7 kDa after removal of the signal peptide. The apparent molecular mass of CCR6-mFc is approximately 35-55 kDa due to glycosylation.
Formulation & Reconstitution-8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.Storage & ShippingThis gene encodes a member of the beta chemokine receptor family, which is predicted to be a seven transmembrane protein similar to G protein-coupled receptors.
