Cat. No. FLP100061

PRODUCT INFORMATION

Target CCR9

CC-CKR-9; CDw199; GPR-9-6; GPR28 **Synonyms**

Human CCR9 full length protein-synthetic Description

nanodisc

Delivery In Stock **Uniprot ID** P51686 **Expression Host HEK293**

Protein Families Druggable Genome, GPCR, Transmembrane

Chemokine signaling pathway, Cytokine-cytokine **Protein Pathways**

receptor interaction

The human full length CCR9 protein has a MW of **Molecular Weight**

42.0 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

pH lower than 6.5 in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein is a G protein-coupled receptor with seven transmembrane domains that belongs to the beta chemokine receptor family. Chemokines and their receptors are key regulators of

thymocyte migration and maturation in normal and inflammation conditions. This gene is differentially expressed in T lymphocytes of the small intestine and colon, and its interaction with chemokine 25 contributes to intestinal intra-

epithelial lymphocyte homing to the small intestine. This suggests a role for this gene in directing immune responses to different segments of the gastrointestinal tract. This gene and its exclusive ligand, chemokine 25, are overexpressed in a variety of malignant tumors and are closely associated with tumor proliferation, apoptosis, invasion, migration and drug resistance. This gene maps to the

chemokine receptor gene cluster.

Research use only **Usage**

Background

ELISA assay to evaluate CCR9-Nanodisc 0.2µg Human CCR9-Nanodisc per well

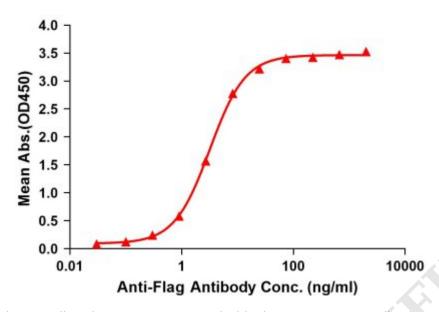

Figure 1. Elisa plates were pre-coated with Flag Tag CCR9-Nanodisc ($0.2\mu g/per$ well). Serial diluted anti-Flag monoclonal antibody solutions were added, washed, and incubated with secondary antibody before Elisa reading. From above data, the EC50 for anti-Flag monoclonal antibody binding with CCR9-Nanodisc is 3.205 ng/ml.

Figure 2. Human CCR9-Nanodisc, Flag Tag on SDS-PAGE
