

## **PRODUCT INFORMATION**

CD112 **Target** 

NECTIN2; HVEB; PRR2; PVRL2; PVRR2 **Synonyms** 

Recombinant Human CD112 with C-terminal **Description** 

6×His tag

**Delivery** In Stock **Uniprot ID** Q92692 **HEK293 Expression Host** 

Tag C-6×His Tag

Molecular

Storage & Shipping

**Background** 

CD112(Gln32-Gly360) 6×His tag Characterization

The protein has a predicted molecular mass of **Molecular Weight** 

36.1 kDa after removal of the signal peptide. The apparent molecular mass of CD112-His is

approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation & Reconstitution

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a single-pass type I membrane glycoprotein with two Ig-like C2-type domains and an Ig-like V-type domain. This protein is one of the plasma membrane components of adherens junctions. It also serves as an entry for certain mutant strains of herpes simplex virus and pseudorabies virus, and it is involved in cell to cell

spreading of these viruses. Variations in this gene have been associated with differences in the

severity of multiple sclerosis. Alternate

transcriptional splice variants, encoding different isoforms, have been characterized.
