

## **PRODUCT INFORMATION**

CD20 **Target** 

B1;Bp35;CD20;CVID5;LEU-16;MS4A2;S7 **Synonyms** 

Recombinant Human CD20 protein with N-**Description** terminal human Fc

**Delivery** In Stock **Uniprot ID** P11836

**Expression Host HEK293** 

Tag N-Human Fc Tag

Molecular

hFc(Glu99-Ala330) CD20(Lys142-Ser188) Characterization

The protein has a predicted molecular mass of 31.6 kDa after removal of the signal peptide.The

**Molecular Weight** apparent molecular mass of hFc-CD20 is

approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the membrane-spanning 4A gene family. Members of this nascent protein family are characterized by common structural features and similar

intron/exon splice boundaries and display unique expression patterns among hematopoietic cells and nonlymphoid tissues. This gene encodes a Blymphocyte surface molecule which plays a role

in the development and differentiation of B-cells into plasma cells. This family member is localized to 11q12, among a cluster of family members. Alternative splicing of this gene results in two transcript variants which encode the same
