

## **PRODUCT INFORMATION**

**Target ADABP** 

**Synonyms** ADABP;ADCP2;CD26;DPPIV;TP103

Recombinant human CD26 protein with C-**Description** 

terminal human Fc tag

**Delivery** Under development

**Uniprot ID** P27487 **Expression Host HEK293** 

Tag C-Human Fc Tag

Molecular

**Purity** 

**Background** 

ADABP(Asn29-Pro766) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of **Molecular Weight** 116.71 kDa after removal of the signal peptide.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before Formulation &

lyophilization. Please see Certificate of Analysis Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

The DPP4 gene encodes dipeptidyl peptidase 4,

which is identical to adenosine deaminase complexing protein-2, and to the T-cell activation antigen CD26. It is an intrinsic type II

transmembrane glycoprotein and a serine exopeptidase that cleaves X-proline dipeptides from the N-terminus of polypeptides. Dipeptidyl peptidase 4 is highly involved in glucose and insulin metabolism, as well as in immune

regulation. This protein was shown to be a functional receptor for Middle East respiratory syndrome coronavirus (MERS-CoV), and protein modeling suggests that it may play a similar role with SARS-CoV-2, the virus responsible for

COVID-19. [provided by RefSeq, Apr 2020]

**Usage** Research use only

Conjugate Unconjugated
