

## **PRODUCT INFORMATION**

NRP1 **Target** 

**Synonyms** Neuropilin-1, CD304

Recombinant human NRP1 protein with C-**Description** 

terminal 6×His tag

**Delivery** In Stock **Uniprot ID** 014786 **Expression Host HEK293** Tag C-6×His Tag

Molecular

Purity

**Background** 

NRP1(Phe22-Pro856) 6×His tag Characterization

The protein has a predicted molecular mass of **Molecular Weight** 

94.6 kDa after removal of the signal peptide. The apparent molecular mass of NRP1-His is

approximately 100-130 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes one of two neuropilins, which contain specific protein domains which allow them to participate in several different types of signaling pathways that control cell migration. Neuropilins contain a large N-terminal

extracellular domain, made up of complement-binding, coagulation factor V/VIII, and meprin domains. These proteins also contains a short membrane-spanning domain and a small cytoplasmic domain. Neuropilins bind many

ligands and various types of co-receptors; they affect cell survival, migration, and attraction. Some of the ligands and co-receptors bound by neuropilins are vascular endothelial growth factor (VEGF) and semaphorin family members. This protein has also been determined to act as a co-receptor for SARS-CoV-2 (which causes COVID-19)

to infect host cells. [provided by RefSeq, Nov 2020]

**Usage** Research use only

Conjugate Unconjugated
