

## **PRODUCT INFORMATION**

CHRM2 **Target Synonyms** HM<sub>2</sub>

Recombinant Human CHRM2 Protein with C-**Description** 

terminal human Fc tag

**Delivery** In Stock **Uniprot ID** P08172 **Expression Host HEK293** 

Tag C-Human Fc Tag

Molecular

**Molecular Weight** 

**Background** 

CHRM2(Met1-Glu22) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

28.6 kDa after removal of the signal peptide. The apparent molecular mass of CHRM2-hFc is approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The muscarinic cholinergic receptors belong to a larger family of G protein-coupled receptors. The functional diversity of these receptors is defined by the binding of acetylcholine to these receptors and includes cellular responses such as adenylate cyclase inhibition, phosphoinositide degeneration, and potassium channel mediation. Muscarinic receptors influence many effects of acetylcholine in the central and peripheral nervous system. The muscarinic cholinergic receptor 2 is involved in

mediation of bradycardia and a decrease in cardiac contractility. Multiple alternatively spliced transcript variants have been described for this
