

PRODUCT INFORMATION

EFNA4 **Target**

Synonyms EFL4; EPLG4; LERK4; LERK-4

Recombinant human EFNA4 Protein with C-**Description**

terminal human Fc tag

Delivery In Stock **Uniprot ID** P52798 **Expression Host HEK293**

Tag C-Human Fc tag

Molecular

Background

EFNA4(Leu26-Glu169) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of 42.4 kDa after removal of the signal peptide. The

Molecular Weight apparent molecular mass of EFNA4-hFc is

approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the ephrin (EPH) family. The ephrins and EPH-related receptors comprise the largest subfamily of receptor protein-tyrosine kinases and have been implicated in mediating developmental events, especially in the nervous system and in erythropoiesis. Based on their structures and

sequence relationships, ephrins are divided into the ephrin-A (EFNA) class, which are anchored to the membrane by a glycosylphosphatidylinositol linkage, and the ephrin-B (EFNB) class, which are transmembrane proteins. This gene piccode in EFNA class ephrin that has been implicated in proliferation and metastasis of several types of
