

PRODUCT INFORMATION

GAL **Target**

ETL8; GALN; GLNN; GMAP; GAL-GMAP **Synonyms**

Recombinant human GAL Protein with C-terminal **Description**

human Fc tag

Delivery In Stock **Uniprot ID** P22466 **Expression Host HEK293**

Tag C-Human Fc tag

Molecular

Purity

Background

GAL(Ala20-Ser123) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

37.6 kDa after removal of the signal peptide. The apparent molecular mass of GAL-hFc is **Molecular Weight**

approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping

at -80°C (Avoid repeated freezing and thawing).Lyophilized proteins are shipped at

ambient temperature.

This gene encodes a neuroendocrine peptide that is widely expressed in the central and peripheral nervous systems and also the gastrointestinal tract, pancreas, adrenal gland and urogenital tract. The encoded protein is a precursor that is

proteolytically processed to generate two mature peptides: galanin and galanin message-associated peptide (GMAP). Galanin has diverse physiological functions including nociception, feeding and energy homeostasis, osmotic regulation and water balance. GMAP has been demonstrated to possess antifungal activity and hypothesized to be part of the innate immune
