

## **PRODUCT INFORMATION**

IFN **Target** 

Interferon Gamma;IFN-Gamma;Immune **Synonyms** 

Interferon; IFNG

Recombinant Human Interferon Gamma is produced by our Mammalian expression system **Description** 

and the target gene encoding Gln24-Gln166 is

expressed.

**Delivery** In Stock **Uniprot ID** P01579 **Expression Host HEK293** 

Molecular

Not available Characterization

**Molecular Weight** 16.8 KDa

Greater than 95% as determined by reducing **Purity** 

SDS-PAGE.

Formulation & Reconstitution

**Background** 

Storage & Shipping

Lyophilized from a 0.2 µm filtered solution of 20mM PB, 4% Mannitol, 2% Sucrose, 0.02%

Tween80, pH7.4.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

témperature.

IFNγ is the major interferon produced by mitogenically or antigenically stimulated lymphocytes. It is structurally different from type I

interferon and its major activity is

immunoregulation. It has been implicated in the expression of class II histocompatibility antigens in cells that do not normally produce them, leading to autoimmune disease. Interferon

gamma is produced mainly byT-cells and natural killer cells activated by antigens, mitogens, or alloantigens. It is produced by lymphocytes expressing the surface antigens CD4 and CD8. IFNy synthesis is induced by IL-2, FGF-basic, and
