

PRODUCT INFORMATION

IFNA1 **Target**

Synonyms IFN-alpha-1/13;LeIF D;IFNA13

Recombinant human IFNA1 protein with C-**Description**

terminal human Fc tag

Delivery In Stock **Uniprot ID** P01562 **Expression Host HEK293**

Tag C-Human Fc Tag

Molecular

Storage & Shipping

Background

IFNA1(Cys24-Glu189) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

45.5 kDa after removal of the signal peptide. The **Molecular Weight** apparent molecular mass of IFNA1-hFc is

approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene is a member of the alpha interferon gene cluster on chromosome 9. The encoded cytokine is a member of the type I interferon family that is produced in response to viral infection as a key part of the innate immune response with potent antiviral, antiproliferative and immunomodulatory properties. This cytokine,

like other type I interferons, binds a plasma membrane receptor made of IFNAR1 and IFNAR2 that is ubiquitously expressed, and thus is able to act on virtually all body cells. This cytokine is upregulated in preeclamptic placentage in the substant of preeclamptic placentage in thought to be a mediator of preeclampsia.
