

PRODUCT INFORMATION

Target	IFNGR1
Synonyms	CD119; IFNGR; IMD27A; IMD27B
Description	Recombinant human IFNGR1 Protein with C-terminal 10×His tag
Delivery	In Stock
Uniprot ID	P15260
Expression Host	HEK293
Tag	C-10×His tag
Molecular Characterization	IFNGR1(Glu18-Gly245) 10×His tag
Molecular Weight	The protein has a predicted molecular mass of 27.2 kDa after removal of the signal peptide. The apparent molecular mass of IFNGR1-His is approximately 35-55 kDa due to glycosylation.
Purity	The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue staining.
Formulation & Reconstitution	Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.
Storage&Shipping	Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
Background	This gene (IFNGR1) encodes the ligand-binding chain (alpha) of the gamma interferon receptor. Human interferon-gamma receptor is a heterodimer of IFNGR1 and IFNGR2. A genetic variation in IFNGR1 is associated with susceptibility to Helicobacter pylori infection. In addition, defects in IFNGR1 are a cause of mendelian susceptibility to mycobacterial disease, also known as familial disseminated atypical mycobacterial infection. [provided by RefSeq, Jul 2008]
Usage	Research use only
Conjugate	Unconjugated
