

PRODUCT INFORMATION

| | |
|---|---|
| Target | ITGA2;ITGB1 |
| Synonyms | Integrin alpha 2 beta 1;ITGA2 and ITGB1 |
| Description | Recombinant human ITGA2 protein with C-terminal 6×His tag and human ITGB1 protein with C-terminal human Fc tag |
| Delivery | In Stock |
| Uniprot ID | P17301; P05556 |
| Expression Host | HEK293 |
| Tag | C-6×His Tag and C-Human Fc Tag |
| Molecular Characterization | ITGA2(Tyr30-Thr1132) 6×His tag and ITGB1(Gln21-Asp728) hFc(Glu99-Ala330) |
| Molecular Weight | The heterodimer protein has a predicted molecular mass of 121.8 kDa and 104.5 kDa separately after removal of the signal peptide. |
| Purity | The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. |
| Formulation & Reconstitution | Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. |
| Storage&Shipping | Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature. |
| Sterility | Products are supplied non-sterile. For cell culture applications, dilute in appropriate medium and sterile-filter (0.22 µm) prior to use. |
| Background | Integrin alpha 2 beta 1 is one of twelve integrin family adhesion receptors that share the beta 1 subunit. It is a receptor for laminin, collagen, collagen C-propeptides, fibronectin and E-cadherin. It recognizes the proline-hydroxylated sequence G-F-P-G-E-R in collagen. It is responsible for adhesion of platelets and other cells to collagens, modulation of collagen and collagenase gene expression, force generation and organization of newly synthesized extracellular matrix. Integrin ITGA2:ITGB1 acts as a receptor for Human rotavirus A and Human echoviruses 1 and 8. DGEA inhibited rotavirus binding to alpha2beta1 and infectivity. In a novel process, integrin-using viruses bind the alpha2 I domain of alpha2beta1 via DGE in VP4 and interact with alphaXbeta2 (via GPR) and alphaVbeta3 by using VP7 to facilitate cell entry and infection. |
| Usage | Research use only |
| Conjugate | Unconjugated |
