

PRODUCT INFORMATION

ITGA2 **Target**

Synonyms Integrin alpha-2; Collagen receptor; GPIa; CD49b

Recombinant human ITGA2 Protein with C-**Description**

terminal 6×His tag

Delivery In Stock **Uniprot ID** P17301 **Expression Host HEK293** Tag C-6×His Tag

Molecular

Molecular Weight

Reconstitution

Background

ITGA2(Thr30-Thr1132) 6×His tag Characterization

The protein has a predicted molecular mass of

121.8 kDa after removal of the signal peptide. The apparent molecular mass of ITGA2-His is approximately 130-250 kDa due to glycosylation. The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes the alpha subunit of a transmembrane receptor for collagens and related proteins. The encoded protein forms a heterodimer with a beta subunit and mediates the adhesion of platelets and other cell types to the extracellular matrix. Loss of the encoded protein is associated with bleeding disorder

platelet-type 9. Antibodies against this protein are found in several immune disorders, including neonatal alloimmune thrombocytopenia. This gene is located adjacent to a related alpha subunit gene. Alternative splicing results in multiple transcript variants. [provided by RefSeq,
