Purity

Background

PRODUCT INFORMATION

Target ITGB7

Synonyms integrin; beta 7; integrin beta 7 subunit

Recombinant human ITGB7 protein with C-

terminal human Fc tag

Delivery Under development

Uniprot ID P26010 Expression Host HEK293

Tag C-Human Fc Tag

Molecular
Characterization

ITGB7 (Glu20-His723) hFc (Glu99-Ala330) cotranslates with ITGAE (Phe19-Ser1124) hFc

(Glu99-Ala330).

Molecular Weight The protein has a predicted molecular mass of 105.16 kDa after removal of the signal peptide.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

This gene encodes a protein that is a member of the integrin superfamily. Members of this family are adhesion receptors that function in signaling from the extracellular matrix to the cell. Integrins are heterodimeric integral membrane proteins composed of an alpha chain and a beta chain. The encoded protein forms dimers with an alpha4 chain or an alphaE chain and plays a role in leukocyte adhesion. Dimerization with alpha4 forms a homing receptor for migration of

forms a homing receptor for migration of lymphocytes to the intestinal mucosa and Peyer's patches. Dimerization with alphaE permits binding to the ligand epithelial cadherin, a calcium-dependent adhesion molecule. Alternate splicing results in multiple transcript variants. Additional alternatively spliced transcript variants
