PRODUCT INFORMATION

Target	M-CSF
Synonyms	CSF-1;MCSF
Description	Recombinant Human M-CSF with C-terminal mouse Fc tag
Delivery	In Stock
Uniprot ID	P09603
Expression Host	HEK293
Tag	C-Mouse Fc Tag
Molecular Characterization	M-CSF(Glu33-Arg255) mFc(Pro99-Lys330)
Molecular Weight	The protein has a predicted molecular mass of 51.2 kDa after removal of the signal peptide.The apparent molecular mass of M-CSF-mFc is approximately 55-75 kDa due to glycosylation.
Purity	The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.
Formulation & Reconstitution	Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.
Storage&Shipping	Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
Sterility	Products are supplied non-sterile. For cell culture applications, dilute in appropriate medium and sterile-filter (0.22 μm) prior to use.
Background	The protein encoded by this gene is a cytokine that controls the production, differentiation, and function of macrophages. The active form of the protein is found extracellularly as a disulfide-linked homodimer, and is thought to be produced by proteolytic cleavage of membrane-bound precursors. The encoded protein may be involved in development of the placenta. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Sep 2011]
Usage	Research use only
Conjugate	Unconjugated
