

PRODUCT INFORMATION

Tag C-Flag&Strep Tag

MDR-1 **Target**

ABCB1; CD243; CLCS; GP170; MDR1; p-170; P-GP; **Synonyms**

Human MDR-1-Strep full length protein-synthetic Description

nanodisc 6~8weeks

Delivery Uniprot ID P08183 **Expression Host** HFK293

Druggable Genome, ES Cell Differentiation/IPS, **Protein Families**

Transmembrane

Protein Pathways ABC transporters

The human full length MDR-1-Strep protein has a MW of 141.5 kDa Molecular Weight

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% Formulation & 8% trehalose is added as protectants before Reconstitution lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Storage & Shipping Lyophilized proteins are shipped at ambient

temperature.

The membrane-associated protein encoded by this gene is a member of the superfamily of ATP-binding cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intra-cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, White). This protein is a member of the MDR/TAP subfamily. Members of the MDR/TAP subfamily are involved in multidrug assistance. The protein appealed by this gene is resistance. The protein encoded by this gene is

Background an ATP-dependent drug efflux pump for

xenobiotic compounds with broad substrate specificity. It is responsible for decreased drug accumulation in multidrug-resistant cells and often mediates the development of resistance to anticancer drugs. This protein also functions as a transporter in the blood-brain barrier. Mutations in this gene are associated with colchicine resistance and Inflammatory bowel disease 13. Alternative splicing and the use of alternative promoters results in multiple transcript variants.
