

## PRODUCT INFORMATION

|   |   |
|---|---|
| <b>Tag</b>                              | C-Flag&Strep Tag  |
| <b>Expression Host</b>                  | HEK293  |
| <b>Target</b>                           | MDR-1   |
| <b>Synonyms</b>                         | ABCB1; CD243; CLCS; GP170; MDR1; p-170; P-GP; PGY1  |
| <b>Description</b>                      | Human MDR-1-Strep full length protein-synthetic nanodisc  |
| <b>Uniprot ID</b>                       | P08183  |
| <b>Protein Families</b>                 | Druggable Genome, ES Cell Differentiation/IPS, Transmembrane  |
| <b>Protein Pathways</b>                 | ABC transporters  |
| <b>Molecular Weight</b>                 | The human full length MDR-1-Strep protein has a MW of 141.5 kDa   |
| <b>Delivery</b>                         | 6~8weeks  |
| <b>Formulation &amp; Reconstitution</b> | Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.  |
| <b>Sterility</b>                        | Products are supplied non-sterile. For cell culture applications, dilute in appropriate medium and sterile-filter (0.22 µm) prior to use.   |
| <b>Storage&amp;Shipping</b>             | Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.   |
| <b>Background</b>                       | The membrane-associated protein encoded by this gene is a member of the superfamily of ATP-binding cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intra-cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, White). This protein is a member of the MDR/TAP subfamily. Members of the MDR/TAP subfamily are involved in multidrug resistance. The protein encoded by this gene is an ATP-dependent drug efflux pump for xenobiotic compounds with broad substrate specificity. It is responsible for decreased drug accumulation in multidrug-resistant cells and often mediates the development of resistance to anticancer drugs. This protein also functions as a transporter in the blood-brain barrier. Mutations in this gene are associated with colchicine resistance and Inflammatory bowel disease 13. Alternative splicing and the use of alternative promoters results in multiple transcript variants. |
| <b>Usage</b>                            | Research use only   |
| <b>Conjugate</b>                        | Unconjugated  |
