

#### **PRODUCT INFORMATION**

PDL1 **Target** 

PD-L1;CD274;B7-H1;PDCD1L1;PDCD1LG1 **Synonyms** Recombinant human PD-L1 protein with C-Description

terminal mouse Fc and 6×His tag

**Delivery** In Stock **Uniprot ID** Q9NZQ7 **Expression Host HEK293** 

Tag C-Mouse Fc and 6×His Tag

Molecular PD-L1(Phe19-Arg238) mFc(Pro99-Lys330) 6×His

Characterization

**Molecular Weight** 

The protein has a predicted molecular mass of 52.3 kDa after removal of the signal peptide. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

**Purity** 

staining.

Formulation & Reconstitution

**Background** 

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

Storage & Shipping

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes an immune inhibitory receptor ligand that is expressed by hematopoietic and non-hematopoietic cells, such as T cells and B cells and various types of tumor cells. The encoded protein is a type I transmembrane protein that has immunoglobulin V-like and C-like domains. Interaction of this ligand with its receptor inhibits T-cell activation and cytokine production. During infection or inflammation of normal tissue, this interaction is important for

preventing autoimmunity by maintaining homeostasis of the immune response. In tumor microenvironments, this interaction provides an immune escape for tumor cells through cytotoxic T-cell inactivation. Expression of this gene in tumor cells is considered to be prognostic in

many types of human malignancies, including colon cancer and renal cell carcinoma. Alternative splicing results in multiple transcript variants.
