

PRODUCT INFORMATION

Target PLAT

T-PA;TPA **Synonyms**

Recombinant Human PLAT Protein with C-terminal Description

6×His tag

Delivery In Stock **Uniprot ID** P00750 **Expression Host HEK293**

Tag C-6×His Tag

Molecular

Storage & Shipping

Background

PLAT(Ser36-Pro562) 6×His tag Characterization

The protein has a predicted molecular mass of **Molecular Weight**

59.9 kDa after removal of the signal peptide. The apparent molecular mass of PLAT-His is

approximately 55-70 kDa due to glycosylation. The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes tissue-type plasminogen activator, a secreted serine protease that

converts the proenzyme plasminogen to plasmin, a fibrinolytic enzyme. The encoded preproprotein is proteolytically processed by plasmin or trypsin to generate heavy and light chains. These chains associate via disulfide linkages to form the heterodimeric enzyme. This enzyme plays a role in cell migration and tissue remodeling. Increased

enzymatic activity causes hyperfibrinolysis, which manifests as excessive bleeding, while decreased activity leads to hypofibrinolysis, which can result in thrombosis or embolism. Alternative splicing of this gene results in multiple transcript variants, at least one of which encodes an isoform that is proteolytically processed. [provided by RefSeq,

Jan 2016]

Usage Research use only Conjugate Unconjugated

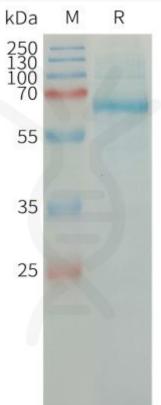

Figure 1.Human PLAT Protein, His Tag on SDS-PAGE under reducing condition.
