

PRODUCT INFORMATION

Tag	C-Flag Tag
Expression Host	HEK293
Target	PTH1R
Synonyms	EKNS, PFE, PTHR, PTHR1
Description	Human PTH1R full length protein-synthetic nanodisc
Uniprot ID	Q03431
Protein Families	GPCR, Transmembrane, Druggable Genome,
Protein Pathways	Endochondral Ossification, GPCRDB Class B Secretin-like, Osteoblasts, Cancer,
Molecular Weight	The human full length PTH1R protein has a MW of 66.4kDa
Delivery	6~8weeks
Formulation & Reconstitution	Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution
Sterility	Products are supplied non-sterile. For cell culture applications, dilute in appropriate medium and sterile-filter (0.22 µm) prior to use.
Storage & Shipping	Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
Background	The protein encoded by this gene is a member of the G-protein coupled receptor family 2. This protein is a receptor for parathyroid hormone (PTH) and for parathyroid hormone-like hormone (PTHrP). The activity of this receptor is mediated by G proteins which activate adenylyl cyclase and also a phosphatidylinositol-calcium second messenger system. Defects in this receptor are known to be the cause of Jansen's metaphyseal chondrodysplasia (JMC), chondrodysplasia Blomstrand type (BOCD), as well as enchondromatosis. Two transcript variants encoding the same protein have been found for this gene. [provided by RefSeq, May 2010]
Usage	Research use only
Conjugate	Unconjugated
