**Delivery** 

**Uniprot ID** 

**Background** 

**Protein Families** 

## **PRODUCT INFORMATION**

Target TA2R1

**Synonyms** T2R1, TRB7

**Description**Human TA2R1 full length protein-synthetic

nanodisc 6~8weeks Q9NYW7

**Expression Host** HEK293

Protein Pathways N/A

Molecular Weight

The human full length TA2R1 protein has a MW of

Transmembrane, Druggable Genome,

34.3kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

pH lower than 6.5 in subsequent experiments.
Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

**Storage & Shipping** Intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of a family of candidate taste receptors that are members of the G protein-coupled receptor superfamily and that are specifically expressed by taste receptor cells of the tongue and palate epithelia. This intronless taste receptor gene encodes a 7-

transmembrane receptor protein, functioning as a bitter taste receptor. This gene is mapped to chromosome 5p15, the location of a genetic locus (PROP) that controls the detection of the bitter compound 6-n-propyl-2-thiouracil. [provided by
