<b>Sterility</b>	Products are supplied non-sterile. For cell culture applications, dilute in appropriate medium and sterile-filter (0.22 µm) prior to use.
<b>Background</b>	TACR3 encodes the tachykinin receptor 3 (NK3 receptor), a G-protein coupled receptor (GPCR) that binds the neuropeptide neurokinin B (NKB). It primarily couples to Gq/11 proteins, activating phospholipase C (PLC), elevating intracellular Ca <sup>2+</sup> , and stimulating downstream MAPK and PKC signaling pathways. TACR3 is expressed in the central nervous system, hypothalamus, and reproductive tissues, where it regulates neuroendocrine secretion, thermoregulation, and reproductive hormone release. Mutations in TACR3 are associated with hypogonadotropic hypogonadism and pubertal delay, while pharmacological modulation of NK3R has therapeutic potential in menopausal hot flashes, psychiatric disorders, and neuroendocrine dysfunctions.
<b>Usage</b>	Research use only
<b>Conjugate</b>	Unconjugated
