

PRODUCT INFORMATION

Target TIE2

CD202B;GLC3E;TIE-2;TIE2;VMCM;VMCM1 **Synonyms**

Recombinant human TIE2 protein with C-terminal **Description**

human Fc tag

Delivery Under development

Uniprot ID Q02763 **Expression Host HEK293**

Tag C-Human Fc Tag

Molecular

Purity

Background

TIE2 (Trp23-Leu748) hFc(Glu99-ALA330) Characterization

The protein has a predicted molecular mass of **Molecular Weight** 105.38 kDa after removal of the signal peptide.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before Formulation & Reconstitution

lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a receptor that belongs to the protein tyrosine kinase Tie2 family. The encoded protein possesses a unique extracellular region that contains two immunoglobulin-like domains, three epidermal growth factor (EGF)-like domains and three fibronectin type III repeats. The ligand angiopoietin-1 binds to this receptor and

mediates a signaling pathway that functions in embryonic vascular development. Mutations in this gene are associated with inherited venous

malformations of the skin and mucous membranes. Alternative splicing results in multiple transcript variants. Additional alternatively spliced transcript variants of this

gene have been described, but their full-length nature is not known. [provided by RefSeq, Feb
