

PRODUCT INFORMATION

B7-2 **Target**

Synonyms CD86;ETC-1

Recombinant mouse B7-2 protein with C-terminal **Description**

human Fc tag

Delivery In Stock **Uniprot ID** P42082 **Expression Host HEK293**

Tag C-Human Fc Tag

Molecular

Background

Mouse B7-2(Val24-Glu245) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of **Molecular Weight**

51.4 kDa after removal of the signal peptide. The apparent molecular mass of mB7-2-hFc is

approximately 55-70 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a type I membrane protein that is a member of the immunoglobulin

superfamily. This protein is expressed by antigenpresenting cells, and it is the ligand for two proteins at the cell surface of T cells, CD28 antigen and cytotoxic T-lymphocyte-associated protein 4. Binding of this protein with CD28 antigen is a costimulatory signal for activation of the T-cell. Binding of this protein with cytotoxic T-

lymphocyte-associated protein 4 negatively regulates T-cell activation and diminishes the immune response. Alternative splicing results in several transcript variants encoding different
