

PRODUCT INFORMATION

| | |
|------------------------------|---|
| Target | GIPR |
| Synonyms | GIP-R; Gm160; Gm1081 |
| Description | Recombinant mouse GIPR protein with C-terminal human Fc tag |
| Delivery | In Stock |
| Uniprot ID | Q0P543 |
| Expression Host | HEK293 |
| Tag | C-Human Fc tag |
| Molecular Characterization | Mouse GIPR(Glu19-Gln134) hFc(Glu99-Ala330) |
| Molecular Weight | The protein has a predicted molecular mass of 39.5 kDa after removal of the signal peptide. The apparent molecular mass of mGIPR-hFc is approximately 35-55 kDa due to glycosylation. |
| Purity | The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. |
| Formulation & Reconstitution | Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. |
| Storage & Shipping | Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature. |
| Background | Predicted to enable G protein-coupled peptide receptor activity; gastric inhibitory peptide receptor activity; and glucagon family peptide binding activity. Acts upstream of or within endocrine pancreas development. Predicted to be located in membrane. Predicted to be integral component of membrane. Predicted to be active in plasma membrane. Is expressed in foregut-midgut junction; pancreas; and pancreas primordium. Human ortholog(s) of this gene implicated in cardiovascular system disease; diabetes mellitus; obesity; and type 2 diabetes mellitus. Orthologous to human GIPR (gastric inhibitory polypeptide receptor). [provided by Alliance of Genome Resources, Apr 2022] |
| Usage | Research use only |
| Conjugate | Unconjugated |
